

ISO 5309:2023-12 (E)

Civil small and light unmanned aircraft systems (UAS) - Vibration test methods

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Types of vibration test	1
4.1 Standard vibration test.....	1
4.2 Transportation vibration test.....	2
5 Test conditions	2
5.1 General.....	2
5.2 Conditions for standard vibration test.....	2
5.2.1 Random test.....	2
5.2.2 Sinusoidal test.....	3
5.2.3 Sine-on-random test.....	3
5.3 Conditions for transportation vibration test.....	6
5.3.1 Random test.....	6
5.3.2 Vehicle field test.....	7
5.4 Vibration test requirements and recommendations.....	7
5.5 Control level tolerance requirements.....	8
5.5.1 Random input control.....	8
5.5.2 Sinusoidal control.....	8
6 Test procedure	8
6.1 Random test.....	8
6.1.1 General.....	8
6.1.2 Check before test.....	8
6.1.3 Test article installation.....	8
6.1.4 Test process.....	9
6.1.5 Check after test.....	9
6.2 Sinusoidal test.....	9
6.2.1 General.....	9
6.2.2 Check before test.....	9
6.2.3 Test article installation.....	9
6.2.4 Test process.....	9
6.2.5 Check after test.....	10
6.3 Sine-on-random test.....	10
6.3.1 General.....	10
6.3.2 Check before test.....	10
6.3.3 Test article installation.....	10
6.3.4 Test process.....	10
6.3.5 Check after test.....	11
7 Test report	11
Annex A (informative) Information to be given in the relevant functions	12
Bibliography	13
