ISO 16615:2025-07 (E)

Space systems - Stable operation requirements for spacecraft attitude and orbit control system

Contents

Page

Foreword ..... **v**

Introduction ..... **vi**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **1**

4 Stable operation general principles **2**
4.1 General 2
4.2 Classification of stable operation levels 2
4.2.1 General 2
4.2.2 Continuous operational service 2
4.2.3 Degraded performance operation 3
4.2.4 Emergency transitional operation 3
4.3 Factors affecting stable operation 3
4.3.1 General 3
4.3.2 Anomalies from known sources 3
4.3.3 Anomalies from unknown sources 3
4.4 Capability building for stable operation 3
4.5 Ground-based optimization and operational maintenance 4

5 Data validity assessment requirements **4**
5.1 Basic principles of data validity judgement 4
5.2 Data validity assessment process 5
5.2.1 General 5
5.2.2 Status flag assessment 5
5.2.3 Data validity range assessment 5
5.2.4 Data continuity assessment 5
5.2.5 Data dynamism assessment 5
5.2.6 Data consistency assessment 6

6 Anomaly detection requirements **6**
6.1 Classification of anomaly levels 6
6.1.1 General 6
6.1.2 Component-level anomaly detection 6
6.1.3 System-level anomaly detection 6
6.2 Component-level anomaly detection 6
6.3 System-level anomaly detection 7

7 Software or hardware fault handling requirements **7**
7.1 Fault classification 7
7.1.1 General 7
7.1.2 Software faults 7
7.1.3 Hardware faults 7
7.2 Software fault handling requirements 7
7.3 Hardware fault handling requirements 7

8 Safety boundary check requirements **8**
8.1 Principles of safety boundary checks 8
8.2 Requirements for safety boundary checks of spacecraft structure or mechanism 8
8.3 Requirements for safety boundary checks of spacecraft energy 8
8.4 Requirements for safety boundary checks of spacecraft propellant 8

9 Requirements for emergency survival modes in the spacecraft's AOCS **9**
9.1 Classification of emergency survival modes 9
9.1.1 General 9
9.1.2 Sun-oriented safety mode 9
9.1.3 Stop-control safety mode 9
9.2 Requirements for sun-oriented safety mode handling 9
9.3 Requirements for stop-control safety mode handling 9
10 Cybersecurity requirements for AOCS **10**
10.1 General 10
10.2 Encryption of telemetry data 10
10.3 Access control for ground systems 10
10.4 Anomaly detection for cybersecurity breaches 10
10.5 Fault handling in the event of a cyber-attack 10
10.6 Regular security updates and testing 10
Bibliography **11**
