DIN EN 14186:2008-02 (E)

Advanced technical ceramics - Mechanical properties of ceramic composites at room temperature - Determ ination of elastic properties by an ultrasonic technique

Contents

Page

Foreword 3

1 Scope 4

2 Normative references 4

3 Terms and definitions 4

4 Principle 7

5 Significance and use 10

6 Apparatus 10
6.1 Ultrasonic tank with thermostatic control 10
6.2 Temperature measurement device 10
6.3 Test specimen holder 10
6.4 Transducers 11
6.5 Transducer holders 11
6.6 Pulse generator 11
6.7 Signal recording system 11

7 Test specimens 11

8 Test specimen preparation 11

9 Test procedure 12
9.1 Choice of frequency 12
9.2 Establishment of the test temperature 12
9.3 Reference test without test specimen 12
9.4 Measurement with the specimen 13

10 Calculation 14
10.1 Delay 14
10.2 Calculation of the propagation velocities 14
10.3 Calculation of the refracted angle r 14
10.4 Identification of the elastic constants, Cij 14
10.5 Back calculation of the phase velocities 18
10.6 Polar plots of the velocity curves 18
10.7 Calculation of the quadratic deviation 18
10.8 Calculation of the engineering constants 18

11 Test validity 19
11.1 Measurements 19
11.2 Criterion of validity for the reliability of the Cij components 19

12 Test report 19

Annex A (informative) Example of a presentation of the results for a material with orthothropic symmetry 21

A.1 Velocity curves 21

A.2 Stiffness matrix with stiffness components 22
A.3 Engineering constants 23

Bibliography 24
