DIN EN ISO 21079-2:2008-08 (E)

Chemical analysis of refractories containing alumina, zirconia and silica - Refractories containing 5 % to 45 % of ZrO<(Index)2> (alternative to the X-ray fluorescence method) - Part 2: Wet chemical analysis (ISO 21079-2:2008)

Page

Foreword ... 3

1 Scope ... 4

2 Normative references ... 4

3 Determination of silicon(IV) oxide ... 5

4 Determination of aluminium oxide ... 7

5 Determination of iron(III) oxide ... 10

6 Determination of titanium(IV) oxide ... 11

7 Determination of calcium oxide ... 14

8 Determination of magnesium oxide ... 15

9 Determination of sodium oxide by flame photometry ... 16

10 Determination of potassium oxide by flame photometry ... 17

11 Determination of chromium(III) oxide using diphenylcarbazide ... 18

12 Determination of zirconium oxide (including hafnium oxide) by mandelic acid (α-hydroxybenzeneacetic acid) gravimetric method ... 19

13 Calculation and expression of test results ... 20

14 Test report ... 20

Bibliography ... 21
