DIN 50979:2008-07 (E)

Metallic coatings - Electroplated zinc and zinc alloy coatings on iron or steel with supplementary Cr(VI)-free treatment

Contents

Page

Foreword 3

1 Scope 3

2 Normative references 3

3 Designation 4
3.1 Electrodeposited coatings 4
3.2 Passivation 4
3.3 Sealing agents 4
3.4 Significant (functional) surfaces 5
3.5 Examples of designations 5

4 Information to be supplied by the purchaser to the electroplater 5

5 Basic materials 6

6 Coating and processing 6
6.1 Surface preparation and deposition of zinc or zinc-alloy coating 6
6.2 Supplementary treatments 6
6.2.1 Passivation 6
6.2.2 Sealing 7
6.3 Barrel/rack plating (handling of parts) 7
6.3.1 Barrel electroplating 7
6.3.2 Rack electroplating 7
6.4 Hydrogen embrittlement 7
6.4.1 Basic factors 7
6.4.2 Choice of procedure 8

7 Requirements to be met by coatings and test methods 9
7.1 Thickness 9
7.2 Adhesion 9
7.3 Absence of Cr(VI) 10
7.4 Accelerated corrosion testing 10
7.4.1 General 10
7.4.2 Minimum corrosion resistance of passivated zinc and zinc-alloy coatings 10

8 Test report 12
8.1 General information 12
8.2 Coatings on materials having a tensile strength 1 000 N/mm 13
8.3 Test results 13
