

DIN EN ISO 16784-2:2008-07 (E)

Corrosion of metals and alloys - Corrosion and fouling in industrial cooling water systems - Part 2: Evaluation of the performance of cooling water treatment programmes using a pilot-scale test rig (ISO 16784-2:2006)

Contents		Page
Foreword		3
Introduction		4
1	Scope	5
2	Normative references	5
3	Terms and definitions	5
4	Principle	7
5	Reagents and materials	7
5.1	Water characteristics	8
5.2	Preparation of synthetic test waters using mother solutions	8
6	Apparatus	9
6.1	Temperature measurement	9
6.2	Circulation-rate monitor	9
6.3	Make-up, evaporation and blow-down measurement	9
6.4	Cooling tower	9
7	Test method	10
7.1	Procedure	10
7.1.1	Cleaning of the test assembly	10
7.1.2	Test tube preparation and pre-treatment	10
7.1.3	System water content	10
7.1.4	Procedure to fill the cooling water system	10
7.1.5	Heating the test tubes	11
7.1.6	Flow rate	11
7.1.7	Blow-down and half-life	12
7.1.8	Biocide treatment	12
7.1.9	Make-up water for cooling-tower use	12
7.2	Determination of analytical and control parameters	12
7.3	Test data reporting	13
7.4	Test termination	13
8	Assessment of results	13
8.1	Recording of cooling water quality	13
8.2	Treatment of the test tubes	13
8.3	Assessment of results on deposition and fouling	13
8.4	Assessment of results on corrosion	14
9	Test report	15
Annex A (informative) Test data sheet on the performance of cooling water treatment programmes		16
Annex B (informative) Further information on some methods of measurement and test		19
