

# ISO 22309:2011-10 (E)

## Microbeam analysis - Quantitative analysis using energy-dispersive spectrometry (EDS) for elements with an atomic number of 11 ( Na) or above

---

<b>Contents</b>		<b>Page</b>
Foreword .....		iv
Introduction .....		v
1	Scope .....	1
2	Normative references .....	1
3	Terms and definitions .....	2
4	Specimen preparation .....	5
5	Preliminary precautions .....	6
6	Analysis procedure .....	7
7	Data reduction .....	9
7.1	General .....	9
7.2	Identification of peaks .....	9
7.3	Estimation of peak intensity .....	9
7.4	Calculation of k-ratios .....	10
7.5	Matrix effects .....	10
7.6	Use of reference materials .....	10
7.7	Standardless analysis .....	10
7.8	Uncertainty of results .....	11
7.9	Reporting of results .....	12
Annex A (informative)	The assignment of spectral peaks to their elements .....	13
Annex B (informative)	Peak identity/interferences .....	15
Annex C (informative)	Factors affecting the uncertainty of a result .....	17
Annex D (informative)	Analysis of elements with atomic number < 11 .....	19
Annex E (informative)	Example data from a reproducibility study within a laboratory and between laboratories .....	20
Bibliography .....		22
