

ISO 10976:2012-07 (E)

Refrigerated light hydrocarbon fluids - Measurement of cargoes on board LNG carriers

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms, definitions and abbreviated terms	1
3.1	Terms and definitions	1
3.2	Abbreviated terms	5
4	General operating safety precautions and regulatory requirements	6
4.1	General	6
4.2	Electrical equipment classification	7
4.3	Electromagnetic disturbance	7
4.4	Maintenance	7
4.5	Service conditions	7
4.6	Compatibility	7
4.7	Personnel protection	7
4.8	Procedures	7
5	Measurement systems and equipment	7
5.1	General	7
5.2	Measurement equipment performance	8
5.3	Calibration and certification of measurement equipment	8
5.4	Verification of measurement equipment between dry dockings	9
5.5	Inspection of measurement equipment during transfer operations	9
5.6	Static measurement systems and equipment	9
5.7	Dynamic measurement systems and equipment	19
6	Measurement procedures	19
6.1	General	19
6.2	Static measurement	20
6.3	Gas-up and cool-down quantification	25
6.4	Dynamic measurement	25
7	Cargo calculations	25
7.1	General	25
7.2	LNG volume determination	26
7.3	LNG density determination	26
Annex A (informative)	LNGC design and marine operations	27
Annex B (informative)	Additional considerations for measurement on board an LNGC	34
Annex C (informative)	Examples of tank capacity tables for a spherical tank	38
Annex D (informative)	Calculation examples	44
Annex E (informative)	Sampling	53

Annex F (informative) Marine measurement witnessing checklists	57
Bibliography	61
