Foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 6

4 Symbols and terms 9

5 Classification of radiographic techniques 10

6 General 11
6.1 Protection against ionizing radiation 11
6.2 Surface preparation and stage of manufacture 11
6.3 Location of the weld in the radiograph 12
6.4 Identification of radiographs 12
6.5 Marking 12
6.6 Overlap of digital images 12
6.7 Types and positions of image quality indicators (IQI) 12
6.8 Minimum image quality values 13
6.9 Personnel qualification 14

7 Recommended techniques for making digital radiographs 14
7.1 Test arrangements 14
7.2 Choice of tube voltage and radiation source 20
7.3 Detector systems and metal screens 22
7.4 Alignment of beam 24
7.5 Reduction of scattered radiation 24
7.6 Source-to-object distance 26
7.7 Geometric magnification technique 29
7.8 Maximum area for a single exposure 30
7.9 Processing 30
7.10 Monitor viewing conditions and storage of digital radiographs 31

8 Examination report 32

Annex A (normative) Recommended number of exposures which give an acceptable examination of a circumferential butt weld 34

Annex B (normative) Minimum image quality values 39

Annex C (normative) Determination of basic spatial resolution 45

Annex D (normative) Determination of minimum grey values for CR practice 49

Annex E (informative) Grey values, general remarks 54

Bibliography 56
