ISO 16592:2012-08 (E)

Microbeam analysis - Electron probe microanalysis - Guidelines for determining the carbon content of steels using a calibration curve method

Contents

Page

Foreword iv

1 Scope 1

2 Procedure 1
2.1 General 1
2.2 Reference materials 1
2.3 Specimen preparation 1
2.4 Measurement of carbon K Xray intensity 2
2.5 Background subtraction 3
2.6 Establishment of the calibration curve 4

3 Evaluation of uncertainty 6

4 Test report 6

Annex A (informative) Method of estimating the uncertainty of the calculated value using a calibration curve 8

Annex B (informative) A practical example of the determination of the mass fraction of carbon and the evaluation of uncertainty in a steel 10
