

DIN 50930-6:2013-10 (E)

Corrosion of metals - Corrosion of metallic materials under corrosion load by water inside of pipes, tanks and apparatus - Part 6: Evaluation process and requirements regarding the hygienic suitability in contact with drinking water

Contents		Page
Foreword		3
Introduction		4
1	Scope	5
2	Normative references	5
3	Terms and definitions, symbols and abbreviations	8
3.1	Terms and definitions	8
3.2	Symbols and abbreviations	8
4	Material and product testing	10
4.1	General	10
4.2	Coatings	10
4.3	Soft solders, hard solders and welding additives	11
5	Material testing	11
5.1	General	11
5.2	Characterization of materials	12
5.3	Composition of the test specimens	12
5.4	Chemical analysis of the contact water	13
5.5	Evaluation of the test results	13
6	Areas of application	16
6.1	General	16
6.2	Drinking water quality	17
6.3	Copper	19
6.4	Copper pipes with internal tin plating	19
6.5	Hot dip galvanized ferrous materials	19
6.6	Stainless steel	20
6.7	Unalloyed and low-alloyed ferrous materials (according to DIN EN 12502-5)	20
6.8	Lead	20
7	Protective measures	21
7.1	General	21
7.2	Method	21
Annex A (informative)	Specification of alloy components and unavoidable impurities in reference materials and materials of a category to be tested according to DIN EN 15664-1	22
A.1	General	22
A.2	Requirements for the composition of reference material test specimens	23
A.2.1	Alloy components	23
A.2.2	Unavoidable impurities (content > 0,02 % mass fraction)	23
A.3	Requirements for the composition of reference material test specimens when testing a commercial material	23
A.3.1	Alloy components	23
A.3.2	Unavoidable impurities (content > 0,02 % mass fraction)	23

A.4	Element analyses in the contact water (see 5.4)	23
A.5	Calculation example	24
A.5.1	General	24
A.5.2	Reference material	24
A.5.3	Commercial materials	25
Bibliography	26
