## Nanotechnologies - Vocabulary - Part 8: Nanomanufacturing processes

---

| <b>Contents</b>       |   | <b>Page</b> |
|-----------------------|---|-------------|
| Foreword .....        |   | iv          |
| Introduction .....    |   | vi          |
| 1                     | Scope .....   | 1           |
| 3                     | General terms .....   | 3           |
| 4                     | Directed assembly .....   | 4           |
| 5                     | Self-assembly processes .....   | 4           |
| 6                     | Synthesis .....   | 5           |
| 6.1                   | Gas process phase -- Physical methods .....                               | 5           |
| 6.2                   | Gas process phase -- Chemical methods .....                               | 6           |
| 6.3                   | Liquid process phase -- Physical methods .....                            | 7           |
| 6.4                   | Liquid process phase -- Chemical methods .....                            | 8           |
| 6.5                   | Solid process phase -- Physical methods .....                             | 8           |
| 6.6                   | Solid process phase -- Chemical methods .....                             | 10          |
| 7                     | Fabrication .....   | 11          |
| 7.1                   | Nanopatterning lithography .....  | 11          |
| 7.2                   | Deposition processes .....  | 14          |
| 7.3                   | Etching processes .....   | 16          |
| 7.4                   | Printing and coating .....  | 18          |
| Annex A (informative) | Identification of output resulting from defined synthesis processes ..... | 19          |
| Annex B (informative) | Index .....   | 21          |
| Bibliography .....    |   | 27          |
