DIN EN ISO 16808:2014-11 (E)

Metallic materials - Sheet and strip - Determination of biaxial stress-strain curve by me ans of bulge test with optical measuring systems (ISO 16808:2014)

Contents

Page

Foreword 3

1 Scope 4

2 Symbols and abbreviated terms 4

3 Principle 5

4 Test equipment 5

5 Optical measurement system 9

6 Test piece 9
6.1 General 9
6.2 Application of grid 9

7 Procedure 10

8 Evaluation methods for the determination of the curvature and strains at the pole 10

9 Calculation of biaxial stress-strain curves 11

10 Test report 12

Annex A (informative) International comparison of symbols used in the determination of the bulge test flow curve 14

Annex B (normative) Test procedure for a quality check of the optical measurement system 16

Annex C (informative) Computation of the curvature on the basis of a response surface 19

Annex D (informative) Determination of the equi-biaxial stress point of the yield locus and the hardening curve 21
