

# DIN EN ISO 16811:2014-06 (E)

## Non-destructive testing - Ultrasonic testing - Sensitivity and range setting (ISO 16811:2012)

---

<b>Contents</b>		<b>Page</b>
Foreword .....		4
Introduction .....		5
<b>1</b>	<b>Scope .....</b>	<b>6</b>
<b>2</b>	<b>Normative references .....</b>	<b>6</b>
<b>3</b>	<b>General .....</b>	<b>6</b>
3.1	Quantities and symbols .....	6
3.2	Test objects, reference blocks and reference reflectors .....	6
3.3	Categories of test objects .....	6
3.4	Contouring of probes .....	7
3.4.1	Longitudinally curved probes .....	8
3.4.2	Transversely curved probes .....	8
3.4.3	Concave scanning surface .....	9
<b>4</b>	<b>Determination of probe index and beam angle .....</b>	<b>9</b>
4.1	General .....	9
4.2	Flat probes .....	9
4.2.1	Calibration block technique .....	9
4.2.2	Reference block technique .....	9
4.3	Probes curved longitudinally .....	9
4.3.1	Mechanical determination .....	9
4.3.2	Reference Block Technique .....	11
4.4	Probes curved transversely .....	11
4.4.1	Mechanical determination 6 4.4.2 Reference block technique .....	12
4.5	Probes curved in two directions .....	13
4.6	Probes for use on materials other than non-alloy steel .....	14
<b>5</b>	<b>Time base setting .....</b>	<b>14</b>
5.1	General .....	14
5.2	Reference blocks and reference reflectors .....	14
5.3	Straight beam probes .....	15
5.3.1	Single reflector technique .....	15
5.3.2	Multiple reflector technique .....	15
5.4	Angle beam probes .....	15
5.4.1	Radius technique .....	15
5.4.2	Straight beam probe technique .....	15
5.4.3	Reference block technique .....	15
5.4.4	Contoured probes .....	15
5.5	Alternative range settings for angle beam probes .....	16
5.5.1	Flat surfaces .....	16
5.5.2	Curved surfaces .....	16
<b>6</b>	<b>Sensitivity setting and echo height evaluation .....</b>	<b>18</b>
6.1	General .....	18
6.2	Angle of impingement .....	18
6.3	Distance Amplitude Curve (DAC) technique .....	18
6.3.1	Reference blocks .....	18
6.3.2	Preparation of a Distance Amplitude Curve .....	19

6.3.3	Evaluation of signals using a Distance Amplitude Curve .....	20
6.3.4	Evaluation of signals using a reference height .....	20
6.4	Distance Gain Size (DGS) technique .....	21
6.4.1	General .....	21
6.4.2	Reference blocks .....	23
6.4.3	Use of DGS diagrams .....	23
6.4.4	Restrictions on use of the DGS technique due to geometry .....	25
6.5	Transfer correction .....	25
6.5.1	General .....	25
6.5.2	Fixed path length technique .....	25
6.5.3	Comparative technique .....	26
6.5.4	Compensation for local variations in transfer correction .....	27
Annex A (normative) Quantities and symbols .....		28
Annex B (normative) Reference blocks and reference reflectors .....		31
Annex C (normative) Determination of sound path distance and impingement angle in centrally curved objects .....		34
C.1	Impingement angle .....	34
C.2	Sound path when scanning from the outer (convex) surface: .....	34
C.2.1	Full skip .....	35
C.2.2	Half skip .....	35
C.3	Soundpath when scanning from the inner (concave) surface: .....	36
C.3.1	Full skip .....	36
C.3.2	Half skip .....	37
Annex D (informative) General DGS diagram .....		38
D.1	Distance .....	38
D.2	Gain .....	38
D.3	Size .....	39
Annex E (informative) Determination of contact transfer correction factors .....		40
E.1	General .....	40
E.2	Measurement .....	40
E.3	Evaluation .....	40
Bibliography .....		43
