

ISO 19635:2016-03 (E)

Fine ceramics (advanced ceramics, advanced technical ceramics) - Test method for antialgal activity of semiconducting photocatalytic materials

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Algae used in the test	2
5	Preparation for the test	2
5.1	Conditions for handling of algae	2
5.2	Chemicals, materials, and apparatus	2
5.3	Sterilization and filtration methods	3
5.3.1	Hot-air sterilization	3
5.3.2	Hot-steam sterilization	3
5.3.3	Flaming	4
5.3.4	Sterilization with alcohol	4
5.3.5	Sterilization through filtration	4
5.4	Culture media	4
5.4.1	General	4
5.4.2	C culture medium	5
5.4.3	Slant medium	5
5.4.4	Washing solution	5
6	Cultivation of algae	5
6.1	Transplantation and cultivation of algae	5
6.2	Preparation of test solution	6
7	Photoirradiation method	6
7.1	Measurement of UV light intensity and preparation of the test piece installation location 6 7.2 Photoirradiation conditions	6
8	Test	7
8.1	Preparation of test piece	7
8.2	Cleaning and installation of test pieces	7
8.2.1	Cleaning of test pieces	7
8.2.2	Installation of test pieces	7
8.3	Inoculation of test solution	8
8.4	Washing of test solution immediately after inoculation of test solution	9
8.5	Washing of test solution after test	9
8.6	Measurement according to the three-point absorbance method	9
8.7	Storage in the dark of test piece on which the test solution has been inoculated	10
9	Test results	10
9.1	General	10
9.2	Calculation of antialgal activity on the basis of absorption spectrum method for photocatalytic antialgal materials	11

10	Recording of test results	11
