ISO/TR 18637:2016-12 (E)

Nanotechnologies - Overview of available frameworks for the development of occupational exposure limits and bands for nano-objects and their aggregates and agglomerates (NOAAs)

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Symbols and abbreviated terms 3

5 Description of available processes for setting OELs and OEBs 5
5.1 General considerations 5
5.2 Description of evidence-based process 6
5.3 Substance-specific OELs 8
5.4 Categorical OELs 8
5.5 Initial or default occupational exposure bands 9

6 Substance-specificOELsfornanomaterials 10
6.1 General overview 10
6.2 Available substance-specific OELs 10
6.2.1 Carbon nanotubes 10
6.2.2 Nanoscale TiO2 11
6.2.3 Fullerenes 12
6.3 Evaluation of OEL methods 12
6.3.1 Similarities and differences 12
6.3.2 Influence of methods on derived OEL values for nanomaterials 13
6.3.3 State of the science in support of risk assessment methods for nanomaterials OELs 14

7 Categorical OELs for nanomaterials 15
7.1 Summary of options proposed 15
7.1.1 United Kingdom 15
7.1.2 Germany 15
7.1.3 NIOSH 17
7.1.4 Japan's (AIST's) approaches 17
7.1.5 OECD 18
7.2 Evaluation of categorical OEL 19
7.2.1 Similarities and differences 19
7.2.2 State of the science supporting categorical OELs 20

8 OEBs and control banding for nanomaterials 21
8.1 Overview of current hazard and control banding schemes 21
8.1.1 Comparison of hazard bands and OEBs as applied to inhaled NOAAs 22
8.1.2 ISO hazard banding scheme for NOAAs 25
8.2 Case studies on banding NOAAs 26
8.3 Evaluation of the evidence for initial (default) OEBs for categories of NOAAs 28
8.3.1 Categorical analyses and read-across 28
8.3.2 Utility of in vitro data in OEL/OEB development for NOAAs 29

8.3.3 Options for deriving an OEL or OEB for NOAAs 30

9 Feasibility considerations in the OEL and OEB setting process 30

Annex A (informative) Standard processes for OEL setting 32
