ISO 20263:2017-11 (E)

Microbeam analysis - Analytical electron microscopy - Method for the determination of in terface position in the cross-sectional image of the layered materials

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms,definitionsandabbreviatedterms 1
3.1 Terms and definitions 1
3.2 Abbreviated terms 4

4 Specimen preparation for cross-sectional imaging 4
4.1 General 4
4.2 Requirements for the cross-sectional specimen 5

5 Determination of an interface position 6
5.1 General 6
5.2 Preliminary considerations 6
5.2.1 Ideal model of an interface 6
5.2.2 More realistic model of an interface 6
5.2.3 Dealing with intensity fluctuations in the image 8

6 Detailed procedure for determining the position of the interface 8
6.1 General 8
6.2 Preparing cross-sectional TEM/STEM image 10
6.2.1 Preparing digitized Image 10
6.2.2 Displaying the digitized image 11
6.3 Setting the ROI 11
6.3.1 General 11
6.3.2 Classification of image 11
6.3.3 Procedure of setting the ROI 12
6.4 Acquisition of the averaged intensity profile 17
6.5 Moving-averaged processing 19
6.6 Differential processing 20
6.7 Final location of the interface 21

7 Uncertainty 22
7.1 Uncertainty accumulating from each step of the procedure 22
7.2 Uncertainty of measurement result on image analysis 22

Annex A (informative) Examples of processing the real TEM/STEM images for three image types 24

Annex B (informative) Two main applications for this method 36

Annex C (informative) Calibration of scale unit: Pixel size calibration 43

Bibliography 45
