ISO 19226:2017-11 (E)

Nuclear energy - Determination of neutron fluence and displacement per atom (dpa) in reactor vessel and internals

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Transport theory calculational models 3
4.1 General 3
4.1.1 Output requirements 3
4.1.2 Methodology: transport calculations with fixed sources 3
4.2 Transport calculation 4
4.2.1 Input data 4
4.2.2 Discrete ordinates (SN) method 4
4.2.3 Monte Carlo transport method 4
4.2.4 Adjoint fluence calculations 5
4.3 Validation of neutron fluence calculational values 5
4.4 Determination of calculational uncertainties 5

5 Reactor pressure vessel neutron dosimetry measurements 6
5.1 Introduction 6
5.2 General requirements for reactor vessel neutron metrology 6
5.3 Stable-product neutron dosimeters 7
5.4 Dosimeter response parameters 7
5.5 Uncertainty estimates and measurement validation in standard neutron fields 7

6 Comparison of calculations with measurements 8
6.1 Introduction 8
6.2 Direct comparison of calculated activities with measured sensor activities 8
6.3 Comparison of calculated rates with measured average full-power reaction rates 8
6.4 Comparison of the calculations against measurements using least-squares methods 8

7 Determination of the best-estimate fluence 9

8 Calculational methods for dpa and gas production 9
8.1 Displacements per atom (dpa) 9
8.2 Gas production 9
