ISO 18075:2018-03 (E)

Steady-state neutronics methods for power-reactor analysis

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1
3.1 Terms 1
3.2 Abbreviations 4

4 Relation to other standards 4

5 Methods of calculation 5
5.1 General 5
5.2 Conditions to be considered 5
5.3 Fine-group cross-sections 6
5.3.1 Basic data 6
5.3.2 Preparation of fine-group cross-sections 6
5.3.3 System dependent spectrum calculations 6
5.3.4 Weighting function 6
5.4 Preparation of broad-group libraries 6
5.4.1 General 6
5.4.2 Choice of cell and supercell 7
5.4.3 Cell environment 7
5.4.4 Calculation model 7
5.5 Collapse to few-groups 8
5.6 Calculation of reactivity, reaction rate, and neutron flux distributions 8
5.6.1 Models 8
5.6.2 Uncertainties and assumptions 9
5.7 Calculation of reaction rates in reactor components 9
5.8 Depletion calculations 10
5.9 Common practices 11
5.9.1 Pressurized water reactor (PWR) core physics method 11
5.9.2 Boiling water reactor (BWR) core physics methods 12
5.9.3 Liquid metal reactor (LMR) core physics methods 13
5.9.4 Heavy water reactor HWR core physics methods 15
5.9.5 High temperature gas cooled reactor (HTGR) core physics methods 17

6 Verificationandvalidationofthecalculationsystem 18
6.1 Overview 18
6.2 Verification 18
6.2.1 General 18
6.2.2 Unit testing 18
6.2.3 Integral testing 19
6.3 Validation 19
6.3.1 Unit testing 19
6.3.2 Integral testing 20
6.4 Biases and uncertainties 21

7 Documentation 21

8 Summary of requirements 22

Bibliography 23
