ISO 21066:2018 (E)

Fine ceramics (advanced ceramics, advanced technical ceramics) — Qualitative and semiquantitative assessment of the photocatalytic activities of surfaces by the reduction of resazurin in a deposited ink film

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

4 List of symbols, abbreviations and units

5 Principle

5.1 General
5.2 Qualitative test method (three samples)
5.3 Semiquantitative test method (eight samples)

6 Apparatus

6.1 Coating device
6.2 UV-radiation light source
6.3 UV radiometer
6.4 Irradiation system
6.5 Digital imaging device and analysis software

7 Materials

7.1 Rz ink preparation
7.1.1 Dye purity test (if purity is unknown)
7.1.2 Ink preparation
7.2 Rz ink quality assurance

8 Test sample

8.1 Preparation of test samples
8.2 Cleaning of test samples
8.3 Coating test samples with Rz ink

9 Procedure for the qualitative assessment of activity

9.1 General
9.2 Procedure

10 Procedure for the semiquantitative assessment of activity

10.1 General
10.2 Procedure
10.3 Digital image (RGB) analysis (for one sample)
10.4 Data analysis

11 Test report

11.1 Qualitative assessment of activity
11.2 Semiquantitative assessment of activity

Annex A (informative) Example of Rz ink qualitative test report on samples of a commercial type of photocatalyst-based, self-cleaning glass

Annex B (informative) Example of Rz ink semiquantitative test report on samples of a commercial type of photocatalyst-based, self-cleaning glass[8]

Annex C (informative) Results of inter-laboratory test
