ISO 6158:2018 (E)

Metallic and other inorganic coatings — Electrodeposited coatings of chromium for engineering purposes

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Information to be supplied by the purchaser to the processor

5 Designation

- 5.1 General
- 5.2 Designation specification
- 5.3 Designation of basis metal
- 5.4 Designation of heat treatment requirements
- 5.5 Designation of type and thickness of metal coating
- 5.6 Examples of designations

6 Requirements

- 6.1 Special test specimens
- 6.2 Appearance
- 6.3 Surface finish
- 6.4 Thickness
- 6.5 Hardness
- 6.6 Adhesion
- 6.7 Porosity
- 6.8 Stress relief heat treatment prior to coating
- 6.9 Hydrogen-embrittlement-relief heat treatment
- 6.10 Peening of metal parts
- 6.11 Use of undercoats
- 6.12 Stripping
- 6.13 Corrosion resistance/multilayer chromium plating
- 6.14 Surface roughness of electroplated metallic chromium coating

7 Sampling

Annex A (informative) Typical thickness of metallic chromium coatings specified in engineering applications

Annex B (normative) Thickness test methods for electroplated metallic chromium and other metallic coatings

- B.1 General
- B.2 Destructive tests
- B.2.1 Microscopical method
- B.2.2 Coulometric method
- B.2.3 Scanning electron microscope method
- B.3 Non-destructive tests
- B.3.1 Magnetic method
- B.3.2 Beta backscatter method
- B.3.3 X-ray spectrometric method

Annex C (normative) Determination of cracks and pores in metallic chromium coatings

C.1 General
C.2 Microscopical examination for cracks without pretreatment
C.3 Copper deposition method for cracks and pores — Copper sulfate (Dubpernell test)
C.3.1 Principle
C.3.2 Procedure

Annex D (normative) Classification of different quality/grate of roughness of electrodeposited metallic chromium coatings
