ISO 18184:2019 (E)

Textiles — Determination of antiviral activity of textile products

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

5 Virus and host cell

6 Warning

7 Apparatus

8 Sterilization of apparatus

9 Reagent and medium

10 Preparation

- 10.1 Restoration of host cell from cryopreservation
- 10.2 Subculture of host cell
- 10.3 Cell culture for the infectious virus titre assay
- 10.4 Preparation for test virus
- 10.4.1 General
- 10.4.2 Influenza virus
- 10.4.3 Feline calicivirus
- 10.4.4 Infectivity titre of the test viruses
- 10.4.4.1 Preparation for series of the dilution for the virus suspension
- 10.4.4.2 Determination of the infectious titre
- 10.4.4.2.1 Plaque assay
- 10.4.4.2.2 TCID50 method
- 10.5 Preparation for test specimen
- 10.5.1 Control fabric
- 10.5.2 Preparation of test specimens
- 10.5.3 Sterilization of specimens
- 10.6 Control test
- 10.6.1 General
- 10.6.2 Verification of cytotoxicity by cell sensitivity to virus and the inactivation of antiviral activity

11 Test procedure

- 11.1 Preparation of specimen
- 11.2 Deposit of virus to the specimens
- 11.3 Contacting time
- 11.4 Wash-out of virus immediately after deposit
- 11.5 Wash-out of virus after contacting time

12 Preparation of the series of the dilution for the virus suspension

13 Determination of the infectious titre

13.1 Plaque assay
13.2 TCID50 method

14 Calculation of infectivity titre

14.1 Plaque assay
14.2 TCID50 method
14.2.1 Behrens and Karber method
14.2.2 Example of calculation
14.3 Test result
14.3.1 Verification of this test
14.3.2 Calculation of antiviral activity value

15 Test report

Annex A (informative) Virus strains and host cells

Annex B (normative) Infectivity titre test: Plaque assay

B.1 Test procedure
B.2 Determination of PFU
B.2.1 General
B.2.2 Determination of PFU

Annex C (normative) Infectivity titre test: TCID50 method

C.1 Test procedure

Annex D (informative) Composition of media

D.1 General
D.2 Composition of EMEM
D.3 Composition of RPMI 1640 medium

Annex E (informative) Testing method using specific pathogen free (SPF) embryonated hen's eggs

E.1 General
E.2 Overview
E.3 Specific pathogen free (SPF) embryonated hen's eggs
E.4 Preparation of specimen
E.5 Preparation of the embryonated hen's eggs
E.6 Preparation of virus
E.6.1 Virus cultivation
E.6.2 Preparation of 0,5 % chicken red blood cell suspension
E.7 Test procedure
E.7.1 General
E.7.2 Contact the virus suspension to the specimen
E.7.3 Inoculation of the reacted virus suspension to 10 day old embryonated hen's eggs
E.7.4 Virus assay
E.7.5 Calculation of the virus titre
E.7.6 Antiviral efficacy value

Annex F (informative) Antiviral efficacy — Antiviral performance of the products

Annex G (informative) Interlaboratory test result (1)

G.1 Participants
G.2 Sample
G.3 Test condition
G.4 Test result
G.4.1 Test result of a testing house
G.4.2 Test result of a laboratory

Annex H (informative) Interlaboratory test result (2)

H.1 Participants
H.2 Sample
H.3 Test condition
H.3.1 Virus, host cell, etc.
H.3.2 Plaque assay condition
H.4 Test result

H.4.1 Sample A
H.4.2 Sample B
H.4.3 Sample C
H.4.4 Summary for interlaboratory test results

Page count: 41
