ISO 10752:2019 (E)

Coal sizing equipment — Performance evaluation

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

3.1 General
3.2 Performance parameters

4 Performance criteria

5 Performance parameters

6 Performance test procedures

7 Analytical procedures

8 Evaluation and presentation of performance characteristics

8.1 General
8.2 Basic data
8.3 Reconstituted feed size distribution
8.4 Partition curve
8.5 Partition size
8.6 Sharpness of separation
8.7 Misplaced material curves
8.8 Misplaced material
8.9 Equal errors size
8.10 Theoretical yield
8.11 Material placement efficiency
8.12 Near-size material
8.13 Test and equipment data

9 Tabular and graphical presentation

Annex A (informative) Calculation of the yield of each product of a size separation from size analyses of feed and product materials

A.1 Introduction
A.2 Recommended methods for the calculation of yield values from the size analysis
A.2.1 Symbols
A.2.2 Calculation of yield values from cumulative size analyses
A.2.3 Calculation of yield values from elementary size analyses

Annex B (informative) Worked example — Vibrating screen

Annex C (informative) Worked example — Cyclone

Annex D (informative) Worked example — Deduster
