

DIN EN 17243:2020-05 (E)

Cathodic protection of internal surfaces of metallic tanks, structures, equipment, and piping containing seawater

Contents		Page
European foreword		3
Introduction		4
1	Scope	5
2	Normative references	5
3	Terms and definitions	5
4	Competence of personnel	7
5	General considerations	7
6	Cathodic protection criteria	9
7	Design	11
8	Galvanic anodes system	18
9	Impressed current systems	26
10	Commissioning, operation and maintenance	30
Annex A (informative) Environmental checklist		36
Annex B (informative) Guidance on design values for internal cathodic protection for seawater containing equipment		38
B.1	Typical design cathodic current densities	38
B.2	Coating breakdown factor of protective paint systems	39
Annex C (informative) Calculation of potential distribution inside a pipe or tube		40
C.1	Potential distribution inside a pipe (ignoring anode resistance)	40
C.2	Potential distribution inside a pipe (with anode resistance)	40
C.3	Potential distribution inside a tube	41
Annex D (informative) Design of galvanic anode systems		42
D.1	Anode resistance formulae	42
D.2	Calculation of the anode resistance at the end of life	43
D.3	Electrolyte resistivity	44
D.4	Galvanic anode current output	46
D.5	Anode life	47
D.6	Minimum net weight requirement	47
Annex E (informative) Typical electrochemical characteristics of impressed current anodes. 48		
Annex F (informative) Design of impressed current systems		49
F.1	Internal cathodic protection of tanks	49

F.2	Evaluation of the maximum length of a rod anode projecting into the water flow for mechanical integrity	50
	Bibliography	52
