

ISO 21910-1:2020-01 (E)

Fine bubble technology - C haracterization of microbubbles - Part 1: Off-line evaluation of size index

Contents	Page
Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Requirements	2
4.1 Requirements on the sample	2
4.2 Requirements on the sample transfer and measurement system	2
5 Measuring instruments	3
6 Environment	3
7 Sample transfer and measurement system	3
7.1 General	3
7.2 System structure	3
7.3 Arrangement of components	3
7.3.1 Position of the inlet tube mouth	3
7.3.2 Position of the measuring instrument	3
7.4 Retention container	4
7.4.1 General	4
7.4.2 Configuration requirements for retention container	4
7.5 Loading tube	5
7.5.1 Loading tube inner diameter	5
7.5.2 Loading tube length	5
7.5.3 Curvature of the loading tube	5
7.5.4 Surface roughness	5
7.5.5 Loading tube materials	5
7.5.6 Suppression of loading tube sway	5
7.6 Loading pump	5
7.6.1 General	5
7.6.2 Flow rate (Flow velocity)	5
7.7 Retention time	6
7.8 Dispersion before/during sampling for microbubbles with shell	6
8 Procedure	7
9 Data acquisition	7
9.1 General	7
9.2 Measurement time	8
9.3 Number of measurements	8
9.4 Size category	8
9.5 Results	8
9.6 Calibration and traceability	8
9.7 Uncertainty evaluation	8
10 Correction	8
10.1 General	8
10.2 Reserved water used for blank preparation	8
11 Report	9

Annex A (informative) Example of microbubbles without shell measurement using dynamic image analysis 10

Annex B (informative) Effect of setting arrangement..... 14

Annex C (informative) Example of corrected data by subtraction of blank water 18

Annex D (informative) Example of method repeatability..... 19

Annex E (informative) Example of comparisons among 3 measurement techniques..... 20

Bibliography..... 22
