DIN 51605:2020-11 (E)

Fuels for vegetable oil compatible combustion engines - Fuel from rapeseed oil - Requirements and test methods

Contents

Page

Foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 6

4 Designation and marking 7

5 Product treatment and sampling 7

6 Requirements and testing 7
6.1 General requirements 7
6.2 Requirements for additives 7
6.3 Particularities of the requirements for winter capability 8
6.4 Particularities of the requirements for ignition quality 8
6.5 Additional requirements 8
6.6 Precision and cases of dispute 9

Annex A (informative) Information on precision data 11

Annex B (normative) Adaptation of the test method according to DIN EN 15195:2007-08 for the purposes of rapeseed oil fuel 12

Annex C (informative) Verification of the oil identity 13

C.1 General information 13
C.2 Methods of testing the fatty acid distribution 13
C.3 Sterol analysis 14

Annex D (informative) Further information on properties and test methods 15

D.1 General 15
D.2 Information on the viscosity for the temperature range from -10 °C to 100 °C 15
D.3 Calorific value 15

Bibliography 16

Tables Table 1 -- Generally applicable requirements, test methods and limit values for rapeseed oil fuel 9

Table B.1 -- Requirements deviating from the specifications of DIN EN 15195:2007-08 to take into account the use of rapeseed oil fuel 12

Table C.1 -- Examples of typical fatty acid distributions in some vegetable oils 13

Table C.2 -- Examples of typical sterol compositions in some vegetable oils as in DIN EN ISO 12228 [13] or DGF standard method F-III 1 (98) [12] 14

Table D.1 -- Kinematic viscosity as a function of the temperature 15
