

ISO 22459:2020 (E)

Fine ceramics (advanced ceramics, advanced technical ceramics) — Reinforcement of ceramic composites — Determination of distribution of tensile strength and tensile strain to failure of filaments within a multifilament tow at ambient temperature

Contents

	Foreword
1	Scope
2	Normative references
3	Terms and definitions
4	Principle
5	Significance and use
6	Apparatus
6.1	Tensile testing equipment
6.2	Data recording
7	Test specimen
7.1	General
7.2	Window type specimen
7.3	Cylindrical end type specimen
8	Test specimen preparation
8.1	General
8.2	Window type specimen
8.3	Cylindrical end type specimen
8.4	Number of test specimens
9	Test procedure
9.1	Determination of the initial cross-section area
9.2	Determination of the gauge length
9.3	Gripping
9.4	Selection of strain rate
9.5	Test procedure
9.6	Determination of load train compliance
9.7	Test validity
10	Calculation of results
10.1	Calculation of the load train compliance C_I
10.2	Calculation of probability of filament rupture P_j from the tests on specimens with a gauge length of 200 mm
10.2.1	Determination of the true origin
10.2.2	Construction of envelope curve and determination of instantaneous compliance $C_{t,j}$
10.2.3	Probability of filament rupture
10.3	Distribution of filament rupture strain
10.3.1	Calculation of filament rupture strain
10.3.2	Filament rupture strain distribution
10.4	Distribution of filament strength
10.4.1	Initial cross-section area
10.4.2	Calculation of filament strength
10.4.3	Filament strength distribution

10.4.4 Average filament strengths

10.4.5 Mean filament strength

11 Test report

Annex A (informative) Abstract of the handbook of mathematical functions
