ISO 23363:2020 (E)

Electrodeposited coatings and related finishes — Electroless Ni-P-ceramic composite coatings

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Designation

4.1 General
4.2 Examples of designations

5 Requirements

5.1 Special test specimens
5.2 Surface finish
5.3 Thickness
5.4 Hardness
5.5 Adhesion
5.6 Porosity
5.7 Corrosion resistance
5.8 Stress relief heat treatment prior to coating
5.9 Hydrogen embrittlement relief heat treatment after coating
5.10 Heat treatment to harden the coating
5.11 Heat treatment to improve adhesion
5.12 Coefficient of friction and wear resistance
5.13 Chemical composition
5.14 Undercoats

6 Sampling

Annex A (normative) General classification of ceramic particles for improving hardness, wear and corrosion properties of composite coatings

Annex B (informative) Bath formulation and operating conditions for electroless Ni-P-ceramic composite coatings

Annex C (normative) Methods for the analysis of codeposited nano-sized ceramic particles

C.1 General
C.2 Optical or scanning electron microscopic method
C.3 X-ray analysis method
C.4 Chemical method
