Viscometry - Measurement of kinematic viscosity by means of the Ubbelohde viscometer - Part 3: Calibration and determination of the uncertainty of measurement

Contents

Page

Foreword	3
1 Scope	4
2 Normative references	4
3 Terms and definitions.....	4
4 Symbols and units	4
5 Apparatus and working substances	6
5.1 General	6
5.2 Standard samples and calibration fluids.....	6
6 Viscometer calibration	7
6.1 General	7
6.2 Cleaning viscometers	7
6.3 Calibration with traceable standard samples.....	7
6.4 Calibration by direct comparison with standard viscometers.....	9
7 Uncertainty of measurement.....	10
7.1 General	10
7.2 Measurement uncertainty when measuring viscosity	10
7.3 Uncertainty of viscometer constants when calibrating with standard samples.....	12
7.4 Uncertainty of viscometer constants when calibrating by direct comparison using standard viscometers	12
7.5 Examples.....	13
8 Indication of the measurement result for viscometer calibration.....	14
Annex A (informative) Determining measurement uncertainty.....	15
Bibliography	17

Tables

Table 1 — Symbols and units	4
Table 2 — Flow times for standard samples for viscometers of various sizes	7
Table 3 — Relative variance of the flow time as a function of n and εt	11
Table 4 — Relative uncertainty of measurement for the viscosity determination and viscosity calibration calculated as in Equation (27) to Equation (29) as a function of the uncertainty of the standard viscometer or standard samples.....	13
Table A.1 — Multiplication factor $F1$ as a function of the number n of single measurements	16
Table A.2 — Multiplication factor $F2$ as a function of the number n of single measurements	16
