ISO 22232-3:2020 (E)

Non-destructive testing — Characterization and verification of ultrasonic test equipment — Part 3: Combined equipment

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

4 General requirements for conformity

5 Personnel qualification

6 Description of tests and reporting

6.1 Baseline measurements of characteristic values
6.2 Physical state and external aspects
6.2.1 Procedure
6.2.2 Acceptance criterion
6.2.3 Frequency of testing
6.3 Tests for angle-beam probes
6.3.1 General
6.3.2 Probe index point
6.3.2.1 General
6.3.2.2 Procedure
6.3.2.3 Acceptance criterion
6.3.2.4 Frequency of testing
6.3.3 Beam angle
6.3.3.1 General
6.3.3.2 Procedure
6.3.3.3 Acceptance criterion
6.3.3.4 Frequency of testing
6.3.4 Simultaneous determination of probe index point and beam angle
6.3.4.1 General
6.3.4.2 Procedure
6.3.4.3 Acceptance criteria
6.3.4.4 Frequency of testing
6.4 Vertical linearity
6.4.1 General
6.4.2 Procedure
6.4.3 Acceptance criteria
6.4.4 Frequency of testing
6.5 Sensitivity and signal-to-noise ratio
6.5.1 General
6.5.2 Procedure
6.5.3 Acceptance criterion
6.5.4 Frequency of testing
6.6 Pulse duration
6.6.1 General
6.6.2 Procedure
6.6.3 Acceptance criterion
6.6.4 Frequency of testing
