

ISO 14571:2020 (E)

Metallic coatings on non-metallic basis materials — Measurement of coating thickness — Micro-resistivity method

Contents

	Foreword
1	Scope
2	Normative references
3	Terms and definitions
4	Measurement principle
5	Factors affecting measurement uncertainty
5.1	Range of measurement
5.2	Coating resistivity
5.3	Width of the sample
5.4	Curvature
5.5	Surface roughness
5.6	Temperature
5.7	Probe contact pressure
6	Calibration of instruments
6.1	General
6.2	Calibration standards
6.3	Verification
7	Procedure
7.1	General
7.2	Width of the sample
7.3	Curvature
7.4	Number of measurements
7.5	Surface cleanliness
8	Accuracy requirements
9	Test report
Annex A	(informative) Method for determining the critical current path width
A.1	General
A.2	Sample preparation
A.3	Measurement
