ISO 20304-1:2020 (E)

Fine bubble technology — Water treatment applications — Part 1: Test method for evaluating ozone fine bubble water generating systems by the decolorization of methylene blue

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Decolorization test by ozone fine bubble water

- 4.1 Principle
- 4.2 Test environment conditions
- 4.3 Configuration of test equipment
- 4.4 Raw material gas supply unit (A unit)
- 4.5 Ozone generator supply unit (B unit)
- 4.6 Chemical reaction unit by ozone (C unit)
- 4.7 Discharged ozone treatment unit (D unit)
- 4.8 Calibration procedure
- 4.9 Test procedure

5 Expression of test results of the decolorization effect

- 5.1 Evaluation object
- 5.2 Functional processing
- 5.3 Uncertainty evaluation

6 Measurement of size and number concentration classification using air

7 Test report

Annex A (informative) Examples of in-line measuring instruments

Annex B (informative) Example of test results for ozone bubble and ozone fine bubble water generating systems
