ISO 21765:2020 (E)

Textiles — Determination of fabric deformability by forced mechanical distension

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

5 Apparatus

6 Test specimen

7 Procedure

7.1 Inserting the test specimen
7.2 Specifications of the test
7.2.1 Test parameters
7.2.2 Evaluation parameters
7.3 Test procedure

8 Calculation and specification of the results

8.1 Non-crimp fabric
8.1.1 General
8.1.2 Deformation force
8.1.3 Gap width
8.1.4 Gap portion
8.1.5 Gap shape
8.1.6 Fibre-angle change
8.1.7 Undulation
8.1.8 Loop formation
8.1.9 Waviness
8.1.10 Out-of-roundness
8.2 Woven fabrics
8.2.1 Characteristic value names, symbols and units
8.2.2 Deformation force
8.2.3 Gap portion
8.2.4 Gap area
8.2.5 Gap shape
8.2.6 Fibre-angle change
8.2.7 Undulation
8.2.8 Shearing angle
8.2.9 Waviness
8.2.10 Out-of-roundness
8.2.11 Residual deformation
8.3 Knitted fabrics
8.3.1 Table with characteristic value names, symbols and units
8.3.2 Deformation force
8.3.3 Gap portion
8.3.4 Gap area
8.3.5 Gap shape

8.3.6 Waviness
8.3.7 Out-of-roundness
8.3.8 Residual deformation
8.4 Nonwovens
8.4.1 Table with characteristic value names, symbols and units
8.4.2 Deformation force
8.4.3 Anisotropy
8.4.4 Thinning-out
8.4.5 Waviness
8.4.6 Out-of-roundness
8.4.7 Residual deformation
8.5 Evaluation
9 Test report
Annex A (informative) Example images
Annex B (informative) Statistical data
