ISO 22848:2021-02 (E)

Corrosion of metals and alloys - Test method for measuring the stress corrosion crack growth rate of steels and alloys under static-load conditions in high-temperature water

Contents

Page

Foreword ..... **iv**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **1**

4 Principle of test **2**

5 Specimen **3**
5.1 Specimen orientation 3
5.2 Specimen geometry 3
5.3 Specimen finish 4
5.4 Specimen size requirement 4
5.5 Specimen dimensional measurement 5
5.6 Stress intensity factor, K_I 5

6 Test equipment **5**

7 Crack length measurement by potential drop method **6**

8 Corrosion potential measurement **7**
8.1 General 7
8.2 Measurement method 7

9 Test procedure **7**
9.1 General 7
9.2 Installation in autoclave 8
9.3 Adjustment of test environment 9
9.4 Loading 9
9.4.1 General 9
9.4.2 Fatigue pre-cracking 9
9.4.3 SCC transitioning 9
9.4.4 Static loading 11

10 Evaluation of test results **11**

11 Test report **14**

Annex A (informative) **CDCB specimen geometry and stress intensity factor calculation** **16**

Annex B (informative) **Equipment for SCC growth testing** **19**

Annex C (informative) **Water chemistry and monitoring items in simulated BWR and PWR environments** **22**

Annex D (informative) **Approach to determine crack growth rate** **24**

Bibliography **25**
