Surface chemical analysis — Depth profiling — Measurement of sputtered depth

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Methods of determination of the sputtered depth

4.1 Crater depth measurement after sputter profiling
4.1.1 General description
4.1.2 Mechanical stylus crater depth measurement
4.1.3 Optical interferometry crater depth measurement
4.2 Comparison with sputter profiled samples having interfaces as depth markers
4.2.1 General description
4.2.2 Reference materials
4.2.3 Interface depth determination for layered structures by independent measurements
4.2.3.1 Angle lapping, crater edge analysis or ball cratering and microscopy
4.2.3.2 Cross-section transmission electron microscopy or scanning electron microscopy
4.2.3.3 Rutherford backscattering spectrometry and medium energy ion scattering
4.2.3.4 Electron probe microanalysis and energy dispersive spectrometry
4.2.3.5 X#ray fluorescence (XRF) spectrometry
4.2.3.6 Grazing incidence X-ray reflectivity measurement
4.2.3.7 Ellipsometry
4.2.3.8 Chemical analysis
4.3 Typical applications and uncertainties of the different methods

Annex A Survey of typical applications and uncertainties of the different methods
