## Nanotechnologies — 3D image reconstruction of rod-supported nano-objects using transmission electron microscopy

---

### Contents

	Foreword
	Introduction
1	Scope
2	Normative references
3	Terms and definitions
3.1	Nanotechnology-related terms
3.2	Instrument-related terms
3.3	Measurement-related terms
4	Sample considerations
4.1	General
4.2	Choice of sample rod diameter
5	Instrument factors
5.1	Microscope set up
5.1.1	General
5.1.2	Acceleration voltage
5.1.3	Convergence semi-angle
5.1.4	Collection angle
5.1.5	Microscope magnification
5.1.6	Number of pixels of the detector
5.1.7	Image acquisition time
5.2	Microscope calibration
6	Image capture (data acquisition)
6.1	General
6.2	Procedure
7	Data alignment and volume reconstruction
7.1	General
7.2	Procedure
8	Reconstructed volume evaluation and data analysis
8.1	General
8.2	Identification of nanoparticles and 3D volume
8.3	Thresholding for measurand extraction
9	Expression of results
9.1	Extracting parameters for each well-separated nano-object
9.2	Measurement uncertainty
9.3	Sources of errors
9.3.1	Error arising from sample that is not representative of the object of interest
9.3.2	Acquisition of 2D projected images
9.3.3	Instrument calibration
9.3.4	Alignment of the projected images
9.3.5	Reconstruction of the 3D volume
9.3.6	Discrete representation of the objects (nanoparticles) in 3D
9.3.7	Interpretation of the obtained measurands
9.3.8	Limited number of observed objects (nanoparticles)

**Annex A (informative) Sample preparation**

- A.1 General
- A.2 Nanoparticles suspended in liquid
  - A.2.1 General
  - A.2.2 Carbon rod fabrication in a FIB
  - A.2.3 Suspension deposited onto prefabricated rod
  - A.2.4 Suspension deposited onto silicon wafer
- A.3 Nanocomposites and nanoparticles embedded in matrix
  - A.3.1 General
  - A.3.2 Multilayer sample deposited onto carbon coated TEM sample support grid
  - A.3.3 Catalyst nanoparticles embedded in a support material and nano-objects embedded in a polymer matrix

**Annex B (informative) STEM set up**

- B.1 General
- B.2 Acceleration voltage
- B.3 Convergence semi-angle of the incident probe
- B.4 Collection semi-angle of the detectors
- B.5 Pixel dwell time and pixel size
- B.6 Number of pixels

**Annex C (normative) Tomography reconstruction and visualization software packages**

- C.1 Validation of reconstruction software packages and algorithms
  - C.1.1 General
  - C.1.2 Validation of a reconstruction software package
- C.2 List of reconstruction software packages
  - C.2.1 Data acquisition packages
  - C.2.2 Alignment, reconstruction and interpretation packages

**Annex D (informative) Microscope data collection parameters**

**Annex E (informative) Case study: Metal nanoparticle, ILC results**

- E.1 Sample preparation and use
- E.2 ILC example results

**Annex F (informative) Case study — Organic nanoparticles — Sample preparation and use**

**Annex G (informative) Particle distortions arising from FBP and SIRT reconstruction methods**

**Annex H (informative) Uncertainty budget**

- H.1 Individual errors from independent sources
- H.2 Acquisition of 2D projected image
- H.3 Alignment of the projected images
- H.4 Reconstruction of the 3D volume
- H.5 Discrete representation of the objects (nanoparticles) in 3D
- H.6 Limited number of observed objects (nanoparticles)
