ISO 21654:2021 (E)

Solid recovered fuels — Determination of calorific value

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

4.1 Gross calorific value
4.2 Net calorific value

5 Reagents

6 Laboratory conditions

7 Apparatus

7.1 General
7.2 Auxiliary equipment
7.3 Balances

8 Preparation of test sample

9 Calorimetric procedure

9.1 General
9.2 Preparing the combustion vessel for measurement
9.2.1 General procedure
9.2.2 Using combustion aids
9.3 Assembling the calorimeter
9.4 Combustion reaction and temperature measurements
9.5 Analysis of products of combustion
9.6 Corrected temperature rise θ
9.6.1 Observed temperature rise
9.6.2 Isoperibol and static#jacket calorimeters
9.6.3 Adiabatic calorimeters
9.6.4 Thermometer corrections
9.7 Reference temperature

10 Calibration

10.1 Principle
10.2 Calibration reference
10.2.1 Certification conditions
10.2.2 Calibration conditions
10.3 Valid working range of the effective heat capacity ε
10.4 Ancillary contributions
10.5 Calibration procedure
10.6 Calculation of effective heat capacity for the individual experiment
10.6.1 Constant mass#of#calorimeter#water basis
10.6.2 Constant total#calorimeter#mass basis
10.7 Precision of the mean value of the effective heat capacity ε
10.7.1 Constant value of ε
10.7.2 ε as a function of the observed temperature rise

10.8 Repetition of the determination of effective heat capacity

11 Gross calorific value

11.1 General
11.2 Combustion
11.3 Calculation of gross calorific value
11.3.1 General
11.3.2 Constant mass#of#calorimeter#water basis
11.3.3 Constant total#calorimeter#mass basis
11.3.4 ε as a function of the observed temperature rise
11.4 Expression of results
11.5 Calculation to other bases

12 Precision

12.1 Repeatability limit
12.2 Reproducibility limit

13 Calculation of net calorific value at constant pressure

13.1 General
13.2 Calculations

14 Test report

Annex A (normative) Adiabatic combustion vessel calorimeters

A.1 Principle
A.2 Sources of deviation for the real calorimeter
A.3 Adiabatic conditions
A.3.1 Thermostat
A.3.2 Adiabatic control
A.4 Initial steady state and length of the main period
A.5 Correction for drift at the final temperature
A.6 Strategy for checking on bias

Annex B (normative) Isoperibol and static-jacket combustion vessel calorimeters

B.1 Principle
B.2 Sources of deviation for the real calorimeter
B.3 Choice of jacket temperature
B.4 Rating periods
B.4.1 Initial steady state and fore period
B.4.2 After period and length of the main period
B.5 Calculation of the corrected temperature rise B
B.5.1 General
B.5.2 Regnault#Pfaundler method
B.5.3 Dickinson extrapolation method

Annex C (normative) Automated combustion vessel calorimeters

C.1 The instrument
C.2 Calibration
C.3 Precision requirements for calibrations
C.4 Comparability of calibration and fuel experiments
C.5 Documentation and print#out
C.6 Precision requirements for fuel experiments

Annex D (normative) Removed ash contributors

D.1 Calorific value including removed ash contributors (i.e. included and not taken out)

Annex E (informative) Checklists for the design and procedures of combustion experiments

E.1 Introduction
E.2 Choice of general parameters
E.3 Adiabatic calorimeters
E.3.1 Determination of the corrected temperature rise θ
E.3.2 Evaluation of the effective heat capacity ε
E.3.3 The gross calorific value at constant volume qV,gr
E.4 Isoperibol calorimeters

E.4.1 Determination of the corrected temperature rise θ
E.4.2 Evaluation of the effective heat capacity ε
E.4.3 The gross calorific value at constant volume qV,gr
E.5 Automated combustion vessel calorimeters

Annex F (informative) Examples to illustrate the main calculations used in this document if an automated (adiabatic) combustion vessel calorimeter is used for determinations

F.1 Gross calorific value at constant volume
F.2 Gross calorific value at constant pressure
F.3 Net calorific value
F.3.1 Net calorific value at constant volume
F.3.2 Net calorific value at constant pressure
F.4 Use of typical or default values to calculate calorific values

Annex G (informative) List of symbols used in this document

Annex H (informative) Flow chart for a routine calorific value determination

Annex I (informative) Interlaboratory test results

Annex J (informative) Additional terms for the basis of results expression

Annex K (informative) Environmental aspects
