ISO 20765-5:2022-04 (E)

Natural gas - Calculation of thermodynamic properties - Part 5: Calculation of viscosity, Joule-Thomson coefficient, and isentropic exponent

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Background 1

5 Viscosity, ... 3
5.1 Viscosity as a function of temperature, pressure, and composition 3
5.2 Viscosity as a function of temperature and mass density 6

6 Other properties 6
6.1 Preamble 6
6.2 Joule-Thomson coefficient, ... 8
6.3 Isentropic exponent, ... 9
6.4 Speed of sound, W 10

7 Example calculations 10

8 Conclusions 11

9 Reporting of results 11

Annex A (informative) Symbols and units 12

Annex B (informative) Example LBC viscosity function 13

Annex C (informative) Example routine to convert CV, RD, and CO2 mole fraction to an equivalent C1-C3-N2-CO2 mixture 15

Annex D (informative) Viscosity of methane 16
