DIN 54231:2022-09 (E)

Textiles - Determination of dyes after methanol extraction

Contents

Page

Foreword 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Symbols and abbreviations 6

5 Principle 7

6 Reagents 7

7 Apparatus 8

8 Sampling and preparation of the test specimens 8

9 Procedure 8
9.1 Extraction 8
9.2 Determination with LC 9
9.2.1 General 9
9.2.2 Calibration 9

10 Expression of results 9
10.1 Calculation of the dye content 9
10.2 Precision of the method 9

11 Test report 9

Annex A (normative) Characterization of dyes 10

Annex B (informative) Examples of chromatographic methods 14

B.1 Liquid chromatography method (LC-DAD) for disperse dyes and carcinogenic dyes 14
B.1.1 LC system with a pressure above 400 bar (UHPLC) 14
B.1.2 LC system with a maximum pressure of 400 bar (HPLC) 15
B.2 LC-DAD-MS method for disperse dyes 17
B.2.1 Chromatographic conditions for LC-DAD-MS (HPLC to max. 400 bar) 17
B.2.2 Device parameters for the LC-DAD-MS method 18
B.2.3 Measurement parameters for the LC-DAD-MS method 18
B.3 Liquid chromatography method (LC-MS/MS) for disperse dyes, carcinogenic and other dyes (HPLC to max. 400 bar) 19
B.3.1 LC parameters 19
B.3.2 MS/MS parameters 20

Annex C (informative) Explanatory notes on individual dyes and dye blends 24

C.1 General 24
C.2 Disperse Blue 3 25
C.3 Disperse Blue 35 and Disperse Blue 26 26
C.4 Disperse Yellow 39 30

C.5 Disperse Yellow 49 30
C.6 Dye impurities 31
C.7 Decomposition of Disperse Blue 124 34
C.8 Significance of Michler's base and Michler's ketone for textiles 34

Annex D (informative) Reliability of the method 35

D.1 Precision of the LC-DAD-MS method 35
D.2 Detection limit of LC-DAD-MS method 35
D.3 Measurement uncertainties from various interlaboratory tests 35

Annex E (informative) Calculation 38

Bibliography 39

Figures Figure C.1 -- Structural formula of Disperse Blue 3 25

Figure C.2 -- Example of a chromatogram for Disperse Blue 3 26

Figure C.3 -- Structural formulae of Disperse Blue 35 for the 3 different CAS Nos 27

Figure C.4 -- 1,5-diamino-4,8-dihydroxy-2-(4-hydroxyphenyl)anthraquinone with CAS No. 13716-91-1 27

Figure C.5 -- Structural formulae of Disperse Blue 26 present in technical blends for the 3 different CAS Nos 28

Figure C.6 -- Chromatogram of Disperse Blue 35/26 of a dye synthesized for the DIN Working Group, in which the methyl and dimethyl isomers are enriched 29

Figure C.7 -- Structural formulae of Disperse Yellow 39 for the 2 different CAS Nos 30

Figure C.8 -- Structural formula of Disperse Yellow 49 with CAS No. 54824-37-2 31

Figure C.9 -- Structural formula of Disperse Yellow 49 with CAS No. 6858-49-7 31

Figure C.10 -- Chromatogram of Basic Violet 1 and Solvent Violet 8 with usual impurities 32

Figure C.11 -- Chromatogram of Basic Violet 3 and Solvent Violet 9 with usual impurities 33

Tables Table A.1 -- List of selected dyes 10

Table B.1 -- Reference substances and LC-DAD retention times 16

Table B.2 -- Reference substances and LC-MS retention times 18

Table B.3 -- Reference substances and LC-MS/MS retention times 20

Table C.1 -- List of different molecules present in technical blends of Disperse Blue 35, and their ion masses which can be found using LC-MS 28

Table C.2 -- List of different molecules present in technical blends of Disperse Blue 26, and their ion masses which can be found using LC-MS 28

Table C.3 -- Disperse Yellow 39 with two proposed molecules with corresponding CAS No 30

Table D.1 -- Measurement uncertainties of azo dyes 36

Table D.2 -- Measurement uncertainties of methine dyes 37

Table D.3 -- Measurement uncertainties of anthraquinone dyes 37
