

DIN 25483:2023-07 (E)

Methods of environmental monitoring using integrating solid-state dosimeters

Contents		Page
Foreword		6
Introduction		7
1	Scope	8
2	Normative references	8
3	Terms and definitions	9
4	Symbols	12
5	Requirements on the dosimetry system	16
5.1	General	16
5.2	Rated range of use	17
5.3	Influence quantities	17
5.4	Design, enclosure and marking of dosimeters	17
5.5	Calibration	18
5.6	Documentation	18
6	Process requirements and specifications	19
6.1	Distribution of tasks between evaluation facility and monitoring body	19
6.2	Requirements for measurement sites	20
6.2.1	Number and spatial distribution of measurement sites and dosimeters	20
6.2.2	Site conditions and deployment of dosimeters	20
6.3	Monitoring period $t_{\text{ü}}$	21
6.4	Limiting the handling period t_{H}	22
6.5	Detection of and correction for extraneous radiation during the handling period	22
7	Determining the dose	23
7.1	Determining the dose indication G	23
7.2	Determination of the area dose	24
7.3	Determination of correction factors	25
7.3.1	Climate and long-term correction factor	25
7.3.2	Correction factor for the influence quantity photon energy and radiation incidence direction	26
7.3.3	Correction factor for linearity deviation	26
7.4	Determination of the handling dose H_{H}	26
7.5	Determination of the additional dose	27
8	Measurement uncertainty and characteristic limits	27
8.1	Propagation of measurement uncertainties	27
8.2	Measurement uncertainty of the area dose	27
8.3	Measurement uncertainties of the input quantities of the area dose	28
8.3.1	General procedure	28
8.3.2	Estimate and measurement uncertainty of the dose indication G_{j}	28
8.3.3	Estimate and measurement uncertainty of the climate and long-term correction for preliminary evaluation	29
8.4	Measurement uncertainty of the additional dose	29
8.5	Calculation of the standard uncertainty as a function of the assumed true value of the additional dose	29
8.6	Decision threshold and detection limit of the additional dose	30

8.7	Coverage interval for the additional dose	30
8.8	Best estimate and its associated standard uncertainty of the additional dose	30
9	Sequence of the measurement procedure	31
9.1	Preparing a dosimeter group	31
9.2	Steps at the evaluation facility	31
9.2.1	Preparation of the monitoring period	31
9.2.2	Follow-up of the monitoring period	32
9.3	Steps at the monitoring body	32
9.3.1	Start of the monitoring period	32
9.3.2	End of the monitoring period	32
9.4	Calculation of area doses	32
9.5	Documentation, interpretation and reporting of the monitoring results	33
10	Quality assurance	34
10.1	General	34
10.2	Calibration checks	34
10.3	Participation in comparison programmes	34
Annex A (informative) Information on dose determination in case of incidents and emergency situations		36
A.1	Requirements	36
A.2	Changing dosimeters	36
A.3	Calibration and evaluation	36
Annex B (informative) Information on the determination of the background dose		38
B.1	General	38
B.2	Determination of interval-specific components	39
B.2.1	Background dosimeters at a reference site	39
B.2.2	Statistical evaluation of all area dose measured values within a monitoring interval	40
B.3	Determination of site-specific components	40
B.3.1	Statistical evaluation of unaffected area dose measured values	40
B.3.2	Determination without unaffected monitoring intervals	43
B.3.3	Blanket determination	43
B.4	Use of additional measurement methods	44
Annex C (informative) Example of the determination of the additional dose, its measurement uncertainty and characteristic limits (analytical method)		45
C.1	General	45
C.2	Example data	45
C.3	Input quantities	46
C.3.1	Estimate and measurement uncertainty of the correction factors	46
C.3.2	Estimate and measurement uncertainty of the calibration coefficient N	46
C.3.3	Estimate and measurement uncertainty of the dose indications G _j and G _U	46
C.3.4	Estimate and measurement uncertainty of the handling period t _H	47
C.3.5	Estimate and measurement uncertainty of the natural dose rate nat	47
C.4	Area dose and background dose	47
C.4.1	Determination of the dose values and their uncertainty of measurement	47
C.4.2	Uncertainty budget for the area dose and the background dose	50
C.5	Additional dose	51
C.5.1	Determination of the additional dose and its uncertainty of measurement	51
C.5.2	Uncertainty budget of the additional dose	52
C.5.3	Decision threshold and detection limit of the additional dose	53
C.5.4	Calculation of the decision threshold of the additional dose	54
C.5.5	Calculation of the detection limit of the additional dose	54
C.5.6	Limits of coverage intervals for the additional dose	55
C.5.7	Best estimate of the additional dose and the associated uncertainty	55

Annex D (informative) Example of the determination of the additional dose, its measurement uncertainty and characteristic limits (Monte Carlo method)	57
D.1 General	57
D.2 Comparison of results obtained with the analytical and the Monte Carlo methods: Model functions and numerical examples from Annex C in photon dosimetry	57
D.3 Comparison of results obtained with the analytical and the Monte Carlo methods: Model functions from Annex C in neutron dosimetry	60
Annex E (informative) Environmental dosimetry for neutron radiation with thermoluminescence detectors	65
E.1 General description of method	65
E.2 Example of the determination of the additional dose, its measurement uncertainty and characteristic limits	65
E.2.1 General	65
E.2.2 Input quantities	67
E.2.3 Area dose and background dose	68
E.2.4 Uncertainty budget for the area dose and the background dose	69
E.2.5 Additional dose	70
Annex F (informative) Example of the division of a dosimeter group	74
Bibliography	75
Figures Figure D.1 -- PDF calculated by Monte Carlo method for the area dose H_j (in grey) in comparison with the corresponding normal distribution according to analytical method (solid line)	59
Figure D.2 -- PDF calculated by Monte Carlo method for the background dose $H_{U,j}$ (in grey) in comparison with the corresponding normal distribution according to analytical method (solid line)	59
Figure D.3 -- PDFs calculated using the Monte Carlo method (in grey) for the additional dose $H_{z,j}$ (top), for an additional dose of zero to determine the decision threshold , (middle), and for the detection limit , # (bottom) - each compared to the corresponding normal distribution according to the analytical method (solid lines)	60
Figure D.4 -- PDF calculated by the Monte Carlo method for the area dose H_j (in grey) in comparison with the corresponding normal distribution according to analytical method (solid line)	62
Figure D.5 -- PDF calculated by the Monte Carlo method for the background dose $H_{U,j}$ (in grey) in comparison with the corresponding normal distribution according to analytical method (solid line)	63
Figure D.6 -- PDFs calculated using the Monte Carlo method (in grey) for the additional dose $H_{z,j}$ (top), for an additional dose of zero to determine the decision threshold , (middle), and for the detection limit , # (bottom) - each compared to the corresponding normal distribution according to the analytical method (solid lines)	64
