ISO/TS 19096:2023-11 (E)

Metallic materials - Instrumented indentation test for hardness and materials parameters - Evaluation of stress change using indentation force differences

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Symbols and designations 1

5 Principle 2
5.1 Shift of force/indentation depth curve by stress change 2
5.2 Derivation of stress change from force difference 3

6 Testing machine 3

7 Test piece 3

8 Procedure 4

9 Calculation of stress change 5
9.1 Force and projected area calculation at each state 5
9.2 Force difference 6
9.3 Projected area 6
9.4 Calculation of average stress change 6

10 Uncertainty of the results 6

11 Test report 7

Annex A (normative)Procedureforhardnessuniformityverification 8

Annex B (normative) Combining with stress relief method 9

Annex C (informative) Determination of stress change ratio using Knoop indenter 11

Annex D (informative) Verification of instrumented indentation test residual stress measurement method by bending specimen 13

Annex E (informative) Comparison with hole-drilling and saw-cutting methods 15
