DIN 51545:2024-07 (E)

Testing of lubricants and related products - Determination of the temperature stability of turbine oils

Contents

Page

Foreword ... 4

1 Scope ... 5

2 Normative references ... 5

3 Terms and definitions ... 5

4 Principle ... 6

5 Apparatus ... 6
5.1 General ... 6
5.2 Laboratory apparatus ... 6

6 Reagents ... 7

7 Sampling ... 7

8 Procedure ... 7
8.1 Work sequence for thermal ageing ... 7
8.2 Preparation of the filtration apparatus ... 8
8.3 Preparation of the membrane filter ... 8
8.4 Work sequence for filtration ... 8

9 Evaluation ... 10
9.1 Visual findings ... 10
9.1.1 General ... 10
9.1.2 Tendency to form film deposits ... 10
9.1.3 Nature of the filter residue on the membrane ... 12
9.2 Optional evaluation ... 13
9.2.1 Determining the separation amount ... 13
9.2.2 Determining the loss in mass of the oil sample (evaporation loss) ... 13

10 Expression of results ... 14

11 Precision ... 15

12 Test report ... 15

Anhang A (informative) Example of a report of results ... 16

Bibliography ... 18

Figures

Figure 1 — Example photograph for beakers after thermal treatment ... 7

Figure 2 — Example photograph for beakers after filtration ... 9

Figure 3 — Reference photographs for assessing the tendency to form film deposits ... 11

Figure 4 — Reference photographs for assessing the nature of the filter residue on the membrane ... 13

Tables

Table 1 — Example settings for photographing the beakers **9**

Table 2 — Example settings for photographing the membrane filters **10**

Table 3 — Examples of individual results **14**

Tabelle A.1 — Result report **16**
