DIN EN ISO 16784-1:2025-04 (E)

Corrosion of metals and alloys - Corrosion and fouling in industrial cooling water systems - Part 1: Guidelines and requirements for conducting pilot-scale evaluation of corrosion and fouling control additives for open recirculating cooling water systems (ISO 16784-1:2024)

Contents

Page

European foreword ... **4**

Foreword ... **5**

Introduction ... **6**

1 Scope ... **7**

2 Normative references ... **7**

3 Terms and definitions ... **7**

4 General requirements and recommendations ... **8**
4.1 Selection of test methods ... 8
4.1.1 Laboratory and off-site testing ... 8
4.1.2 On-site testing ... 8
4.1.3 Online testing ... 8
4.2 Cost analysis ... 8

5 Test unit design parameters ... **8**
5.1 General ... 8
5.2 Construction materials ... 9
5.2.1 Cooling towers ... 9
5.2.2 Film fill ... 9
5.2.3 Non-heat-transfer metal surfaces ... 10
5.2.4 Heat exchangers ... 10
5.3 Measuring instrument ... 10
5.4 Other simulation devices ... 11

6 Operating parameters ... **11**
6.1 General ... 11
6.2 Surface temperature ... 11
6.3 Water velocity ... 11
6.4 Residence time ... 11

7 Water quality and contamination ... **12**
7.1 General ... 12
7.2 Natural versus synthetic water supplies ... 12
7.3 Water from different sources ... 12
7.3.1 Fresh water ... 12
7.3.2 Seawater and brackish water ... 12
7.3.3 Recycle/reuse water ... 13
7.3.4 Dual and combined make-up systems ... 13
7.4 Contamination ... 13
7.4.1 General ... 13
7.4.2 Process leaks ... 13
7.4.3 Biological matter ... 13
7.4.4 Airborne solids and gases ... 13

8 Parameters to be evaluated in pilot test units ... **14**
8.1 Corrosion ... 14
8.1.1 General ... 14

8.1.2 Criteria for corrosion evaluations 14
8.1.3 Types of corrosion damage 14
8.1.4 Microbiologically influenced corrosion 14
8.1.5 Methods for evaluating corrosion in pilot-scale test units 14
8.2 Fouling 15
8.2.1 General comment 15
8.2.2 Types of water-side fouling 15
8.2.3 Pilot-scale methods for evaluating fouling (see also ISO 16784-2) 15
8.3 Water treatment additives 16
8.3.1 Combination testing 16
8.3.2 Compatibility of additives 16
9 Design of pilot-scale performance testing facilities 16
9.1 Objectives 16
9.2 The importance of simulating specific process and application environments 16
9.3 Compromises in pilot-scale performance testing 17
9.3.1 Heat source, heat duty and temperature 17
9.3.2 Water chemistry 17
10 Pilot-scale facility operations 18
10.1 Documentation of design 18
10.1.1 General comments 18
10.1.2 Equipment 18
10.1.3 Water treatment 18
10.2 Repeatability of results and comparison with field performance 19
10.3 Record-keeping and reports 19
Annex A (informative) **Selection of circulating cooling water treatment method 20**
Bibliography 21
