## Prevention of hydrogen assisted brittle fracture of high-strength steel components - Part 1: Fundamentals and measures

---

<b>Contents</b>		<b>Page</b>
Foreword .....		iv
Introduction .....		v
1	Scope .....	1
2	Normative references .....	1
3	Terms and definitions .....	1
4	Abbreviated terms .....	4
5	Fundamentals .....	5
5.1	General description of hydrogen embrittlement .....	5
5.2	Conditions for hydrogen embrittlement failure .....	5
5.2.1	General .....	5
5.2.2	Material susceptibility .....	6
5.2.3	Tensile stress .....	7
5.2.4	Sources of atomic hydrogen .....	7
5.3	Mechanism of hydrogen embrittlement of high strength steel .....	8
5.4	Fundamentals of metallic coatings regarding hydrogen uptake and diffusion .....	9
5.4.1	General aspects of metallic electroplated protection layers .....	9
5.4.2	Hydrogen generation during coating process .....	9
5.4.3	Corrosion protection mechanisms by metallic layers .....	9
6	Preventive measures with regard to hydrogen embrittlement .....	12
6.1	General .....	12
6.2	Part design and manufacturing .....	13
6.3	Material related measures and heat treatment .....	13
6.4	Reduction of residual tensile stress (stress relief) .....	14
6.5	Measures related to coating processes .....	14
6.5.1	General .....	14
6.5.2	Pre-treatment -- Cleaning processes .....	15
6.5.3	Electroplating coating processes .....	15
6.5.4	Stripping of coatings .....	15
6.5.5	Corrective actions - Baking .....	16
6.6	Prevention of environmental hydrogen uptake .....	17
6.6.1	General .....	17
6.6.2	Environmentally appropriate design .....	17
Annex A (informative) Electroplating processes .....		18
Annex B (informative) Principles of electrochemical corrosion .....		20
Bibliography .....		23
