

DIN EN 13763-27:2026-04 (E)

Explosives for civil uses - Detonators and detonating cord relays - Part 27: Test methods for electronic initiation systems

Contents		Page
European foreword		7
1	Scope	9
2	Normative references	9
3	Terms and definitions	10
4	Test methods for electronic initiation systems	10
4.1	Verification of completeness of HAZOP	10
4.1.1	Principle	10
4.1.2	Test apparatus	10
4.1.3	Preparation of test sample	10
4.1.4	Procedure	11
4.1.5	Expression of result	11
4.1.6	Test report	11
4.2	Verification of uniqueness of fire command	11
4.2.1	Principle	11
4.2.2	Test apparatus	11
4.2.3	Preparation of test sample	11
4.2.4	Procedure	11
4.2.5	Expression of result	11
4.2.6	Test report	11
4.3	Verification of the latency of electronic initiation systems	12
4.3.1	Principle	12
4.3.2	Test apparatus	12
4.3.3	Preparation of test sample	12
4.3.4	Procedure	12
4.3.5	Expression of results	12
4.3.6	Test report	12
4.4	Verification of data error detection on transmitted information in electronic initiating systems	13
4.4.1	Principle	13
4.4.2	Test apparatus	13
4.4.3	Preparation of test sample	13
4.4.4	Procedure	13
4.4.5	Expression of results	13
4.4.6	Test report	13
4.5	Verification of the electromagnetic compatibility of electronic initiation systems	14
4.5.1	General	14
4.5.2	Verification of the resistance to high-level conducted and radiated electromagnetic disturbances	14
4.5.3	Verification of the resistance to low-level conducted and radiated electromagnetic disturbances	16
4.5.4	Verification of the resistance to surge	19
4.5.5	Verification of the resistance to electrical fast transients and bursts	22
4.5.6	Verification of the resistance to voltage dips and short interruptions	25
4.5.7	Verification of the resistance to electrostatic discharge	28
4.5.8	Verification of Radio Frequency emission	30
4.6	Verification of delay accuracy of electronic initiation systems	32
4.6.1	Principle	32

4.6.2	Test apparatus	32
4.6.3	Preparation of test sample	33
4.6.4	Procedure	35
4.6.5	Expression of result	36
4.6.6	Test report	36
5	Test methods for electronic detonators	37
5.1	Verification of the resistance to overvoltage of electronic detonators with leading wires .	37
5.1.1	Principle	37
5.1.2	Test apparatus	37
5.1.3	Preparation of test sample	37
5.1.4	Procedure	38
5.1.5	Expression of results	39
5.1.6	Test report	39
5.2	Verification of resistance to dynamic pressure of electronic detonators	40
5.2.1	Principle	40
5.2.2	Test apparatus	40
5.2.3	Preparation of test sample	40
5.2.4	Procedure	41
5.2.5	Expression of results	43
5.2.6	Test report	43
5.3	Verification of resistance to slow temperature changes of electronic detonators	43
5.3.1	Principle	43
5.3.2	Test apparatus	44
5.3.3	Preparation of test sample	44
5.3.4	Procedure	44
5.3.5	Expression of result	44
5.3.6	Test report	44
5.4	Verification of resistance to rapid temperature change of electronic detonators	45
5.4.1	Principle	45
5.4.2	Test apparatus	45
5.4.3	Preparation of test sample	45
5.4.4	Procedure	45
5.4.5	Expression of result	45
5.4.6	Test report	45
5.5	Verification of safety against unintended initiation due to electric energy storage in the detonator	46
5.5.1	Principle	46
5.5.2	Test apparatus	46
5.5.3	Preparation of test sample	46
5.5.4	Procedure	46
5.5.5	Expression of results	46
5.5.6	Test report	46
5.6	Verification of defined ways of firing electronic detonators	47
5.6.1	Principle	47
5.6.2	Test apparatus	47
5.6.3	Preparation of test sample	47
5.6.4	Procedure	47
5.6.5	Expression of results	47
5.6.6	Test report	47
5.7	Verification of discharge of firing capacitors of electronic detonators	47
5.7.1	Principle	47
5.7.2	Test apparatus	47
5.7.3	Preparation of test sample	48
5.7.4	Procedure	48
5.7.5	Expression of results	48
5.7.6	Test report	48
5.8	Verification of fuse head current of electronic detonators	49
5.8.1	Principle	49
5.8.2	Test apparatus	49
5.8.3	Preparation of test sample	49
5.8.4	Procedure	49

5.8.5	Expression of result	49
5.8.6	Test report	49
5.9	Verification of autonomous operation of electronic detonators	50
5.9.1	Principle	50
5.9.2	Test apparatus	50
5.9.3	Preparation of test sample	50
5.9.4	Procedure	50
5.9.5	Expression of results	51
5.9.6	Test report	51
6	Test methods for firing units, programming units, testing units and control units of electronic initiation systems	51
6.1	Verification of the maximum output current and the maximum transient output energy pulse of programming units and testing units	51
6.1.1	Principle	51
6.1.2	Test apparatus	51
6.1.3	Preparation of test sample	52
6.1.4	Procedure	52
6.1.5	Expression of test result	53
6.1.6	Test report	53
6.2	Verification of the insulation resistance of firing units, programming units and testing units	53
6.2.1	Principle	53
6.2.2	Test apparatus	54
6.2.3	Preparation of test sample	54
6.2.4	Procedure	54
6.2.5	Expression of results	54
6.2.6	Test report	54
6.3	Verification of the resistance to climatic and mechanical stress of firing units, programming units, testing units and control units	54
6.3.1	Preparation of test sample	54
6.3.2	Verification of the resistance to high temperature	55
6.3.3	Verification of the resistance to rapid temperature changes	56
6.3.4	Verification of the resistance to damp heat - first cycle	57
6.3.5	Verification of the resistance to low temperatures	59
6.3.6	Verification of the resistance to damp heat - remaining five cycles	60
6.3.7	Verification of the resistance to shock of units	61
6.3.8	Verification of the resistance to vibration of units	62
6.3.9	Verification of the resistance to dropping of units	64
6.3.10	Verification of the resistance to damp heat - steady-state	65
6.3.11	Verification of the resistance against ingress of objects or liquids	66
6.4	Verification of system response in case of faults leading to inadvertent initiation or misfires of electronic detonators	68
6.4.1	Principle	68
6.4.2	Test apparatus	68
6.4.3	Preparation of test sample	68
6.4.4	Procedure	68
6.4.5	Expression of result	69
6.4.6	Test result	69
6.5	Verification of fault tolerance of units of electronic initiation systems	69
6.5.1	Fault tolerance against unintended detonation of electronic detonators	69
6.5.2	Fault tolerance against unintended detonation of electric detonators	70
6.6	Verification of incapability of programming and testing units to submit a command to fire electronic detonators	71
6.6.1	Principle	71
6.6.2	Test apparatus	71
6.6.3	Preparation of test sample	71
6.6.4	Procedure	71
6.6.5	Expression of results	71
6.6.6	Test report	72
6.7	Verification of maximum duration of the firing window	72
6.7.1	Principle	72

6.7.2	Test apparatus	72
6.7.3	Preparation of test sample	72
6.7.4	Procedure	72
6.7.5	Expression of results	72
6.7.6	Test report	73
6.8	Verification of user confirmation to fire	73
6.8.1	Principle	73
6.8.2	Test apparatus	73
6.8.3	Preparation of test sample	73
6.8.4	Procedure	73
6.8.5	Expression of test result	73
6.8.6	Test report	73
6.9	Verification of information about blast parameters provided by the units of electronic initiating systems	74
6.9.1	Principle	74
6.9.2	Test apparatus	74
6.9.3	Preparation of test sample	74
6.9.4	Procedure	74
6.9.5	Expression of test result	74
6.9.6	Test report	74
6.10	Verification of remote firing systems entering safe state	75
6.10.1	Principle	75
6.10.2	Test apparatus	75
6.10.3	Preparation of test sample	75
6.10.4	Procedure	75
6.10.5	Expression of test result	75
6.10.6	Test report	75
6.11	Verification of access protection of updates for units of electronic initiation systems	76
6.11.1	Principle	76
6.11.2	Test apparatus	76
6.11.3	Preparation of test sample	76
6.11.4	Procedure	76
6.11.5	Expression of results	76
6.11.6	Test report	76
Annex A (normative) Function test for electronic detonators		77
A.1	Principle	77
A.2	Test apparatus	77
A.3	Preparation of test sample	77
A.4	Procedure	77
A.5	Expression of result	78
Annex ZA (informative) Relationship between this European Standard and the essential requirements of Directive 2014/28/EU relating to the making available on the market and supervision of explosives for civil uses aimed to be covered		79
