

ISO 18518:2025-09 (E)

Magnetic fusion facilities - Requirements for the safety systems raised by the application of the superconducting technology

| Contents | | Page |
|-----------------------|---|-------------|
| Foreword | | iv |
| Introduction | | v |
| 1 | Scope | 1 |
| 2 | Normative references | 1 |
| 3 | Terms and definitions | 1 |
| 4 | Application of superconductivity in fusion facilities | 4 |
| 4.1 | Overview of the superconducting magnet system | 4 |
| 4.1.1 | General | 4 |
| 4.1.2 | Cryogenic technology needed in superconducting magnet system | 4 |
| 4.1.3 | Auxiliary systems to the superconducting magnet system | 5 |
| 4.2 | Safety systems present in fusion facilities | 5 |
| 4.2.1 | Confinement system | 5 |
| 4.2.2 | Nuclear shielding system | 5 |
| 4.2.3 | Auxiliary safety system | 6 |
| 5 | Requirements for confinement system | 6 |
| 5.1 | General | 6 |
| 5.2 | Requirements associated with the presence of superconducting magnets | 6 |
| 5.3 | Protection of confinement system against magnetic energy | 7 |
| 5.4 | Protection of confinement system against other hazard | 7 |
| 6 | Requirements for radiation protection | 8 |
| 6.1 | Safe operation | 8 |
| 6.2 | Maintenance and reparability | 8 |
| 7 | Requirements specific to other systems | 10 |
| 7.1 | Plasma performance monitoring system | 10 |
| 7.2 | Magnetic diagnosis and monitoring system | 10 |
| 7.3 | Quench detection and protection system | 10 |
| 7.4 | Diagnosis and monitoring system in support of confinement systems | 11 |
| 7.5 | Other requirements | 11 |
| Annex A (informative) | Example of Paschen curve | 12 |
| Annex B (informative) | Examples of radiation design limits for super-conducting coils in ITER and DEMO | 13 |
| Annex C (informative) | Examples of peak factors used in the ITER one dimensional neutronic design analyses | 14 |
| Annex D (informative) | Vacuum vessel, first wall and blanket examples | 15 |
| Annex E (informative) | Arcing prevention in superconducting magnets | 17 |
| Bibliography | | 19 |
