

# ISO/ASTM 51276:2002-12 (E)

## Practice for use of a polymethylmethacrylate dosimetry system

---

| <b>Contents</b>                                                             | <b>Page</b> |
|-----------------------------------------------------------------------------|-------------|
| 1 Scope .....                                                               | 1           |
| 2 Referenced documents .....                                                | 1           |
| 3 Terminology .....                                                         | 1           |
| 4 Significance and use .....                                                | 2           |
| 5 Instrument requirements .....                                             | 2           |
| 6 Performance check of instrumentation .....                                | 3           |
| 7 Calibration of the dosimetry system .....                                 | 3           |
| 8 Procedures .....                                                          | 4           |
| 9 Characterization of each stock of dosimeters .....                        | 5           |
| 10 Application of dosimetry system .....                                    | 5           |
| 11 Documentation requirements .....                                         | 5           |
| 12 Measurement uncertainty .....                                            | 5           |
| 13 Keywords .....                                                           | 6           |
| ANNEX .....                                                                 | 6           |
| Bibliography .....                                                          | 7           |
| Table A1.1 Basic properties of available dosimeters .....                   | 6           |
| Table A1.2 Some suppliers of polymethylmethacrylate (PMMA) dosimeters ..... | 6           |
