ISO 14912:2003-03 (E)

Gas analysis - Conversion of gas mixture composition data

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Terms and definitions 1

3 Symbols and units 4

4 Basic principles 6
4.1 Expression of gas mixture composition 6
4.2 Conversion between different quantities 8
4.3 Conversion between different state conditions 9

5 Main procedures 10
5.1 Conversion between different quantities of composition 10
5.2 Conversion to reference conditions 13

6 Practical implementation 13
6.1 Conversion between quantities of composition 13
6.2 Conversion of single analyte contents 14
6.3 Conversion of complete compositions 15
6.4 Conversion between state conditions 15
6.5 Simple approximations applicable to conversion 15

7 Input quantities and their uncertainties 16
7.1 Pure gas data 16
7.2 Gas mixture data 19
7.3 Rough uncertainty estimates 22

8 Conversion uncertainty 22
8.1 General considerations 22
8.2 Conversion of single analyte contents 23
8.3 Conversion of complete compositions 24
8.4 Uncertainty calculation using numerical differentiation 26
8.5 Variances and covariances of input composition data 27

9 Application recommendations 29

Annex A (normative) Assessment of state conditions 30

Annex B (normative) Summation relations for the expression of mixture properties 33

Annex C (informative) Mixture component data 34

Annex D (informative) Examples 40

Annex E (informative) Computer implementation of recommended methods 55

Bibliography 57
