ISO 2177:2003-03 (E)

Metallic coatings - Measurement of coating thickness - Coulometric method by anodic dissolution

Contents

Page

Foreword iv

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Principle 2

5 Instrumentation 2

6 Electrolyte 2

7 Factors affecting the measuring accuracy 3
7.1 Coating thickness 3
7.2 Current variation 3
7.3 Area variation 3
7.4 Agitation (if required) 4
7.5 Alloy layer between coating and substrate 4
7.6 Purity of coatings 4
7.7 Condition of test surface 4
7.8 Density of coating material 4
7.9 Cleanliness of the cell 4
7.10 Cleanliness of electrical connections 4
7.11 Calibration standards (if used) 4
7.12 Non-uniform dissolution 5

8 Procedure 5
8.1 General 5
8.2 Preparation of test surface 5
8.3 Cell application 5
8.4 Electrolysis 5
8.5 Undercoats 5
8.6 Examination after test 6
8.7 Coatings on cylindrical specimens 6

9 Expression of results 6

10 Measurement uncertainty 7

11 Test report 7

Annex A (informative) Typical electrolytes 8

Annex B (informative) Types of instrument 13
