## Surface chemical analysis - X-ray photoelectron and Auger electron spectrometers - Linearity of intensity scale

---

| <b>Contents</b>       |   | <b>Page</b> |
|-----------------------|---|-------------|
| Foreword .....        |   | iv          |
| Introduction .....    |   | v           |
| 1                     | Scope .....   | 1           |
| 2                     | Normative reference .....   | 1           |
| 3                     | Symbols .....   | 1           |
| 4                     | Outline of the methods .....  | 2           |
| 5                     | When to use this International Standard .....   | 2           |
| 6                     | Procedure for evaluating the intensity linearity .....  | 2           |
| 6.1                   | The samples .....   | 2           |
| 6.2                   | Preparing the copper sample .....   | 3           |
| 6.3                   | Preparing the stainless-steel sample or sample holder .....   | 3           |
| 6.4                   | Choosing the spectrometer settings for which the intensity linearity measurement is<br>required .....   | 3           |
| 6.5                   | Operating the instrument .....  | 3           |
| 6.6                   | Measurement of the intensity scale linearity by varying the source flux .....   | 4           |
| 6.7                   | Determination of the intensity scale linearity by varying the source flux .....   | 4           |
| 6.8                   | Measurement of the intensity scale linearity in XPS using the spectrum ratio method for<br>systems with two or more but less than 30 X-ray source emission current settings .....   | 6           |
| 6.9                   | Determination of the intensity scale linearity in XPS using the spectrum ratio method for<br>systems with two or more but less than 30 X-ray source emission current settings ..... | 7           |
| 6.10                  | Completing the analysis .....   | 9           |
| Annex A (informative) | Example results of linearity measurements using the spectrum ratio method<br>(the second method) .....  | 10          |
| Bibliography .....    |   | 13          |
